IQOO HACKATHON 2026 · GRAND FINALE · PRODUCTIVITY TRACK

DeskLess

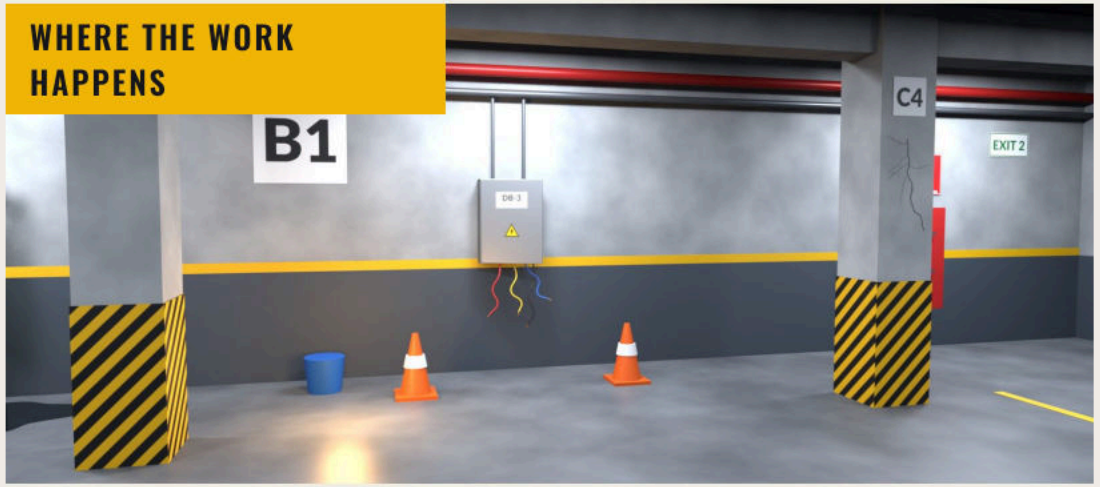

Site inspection reports,
without the desk.

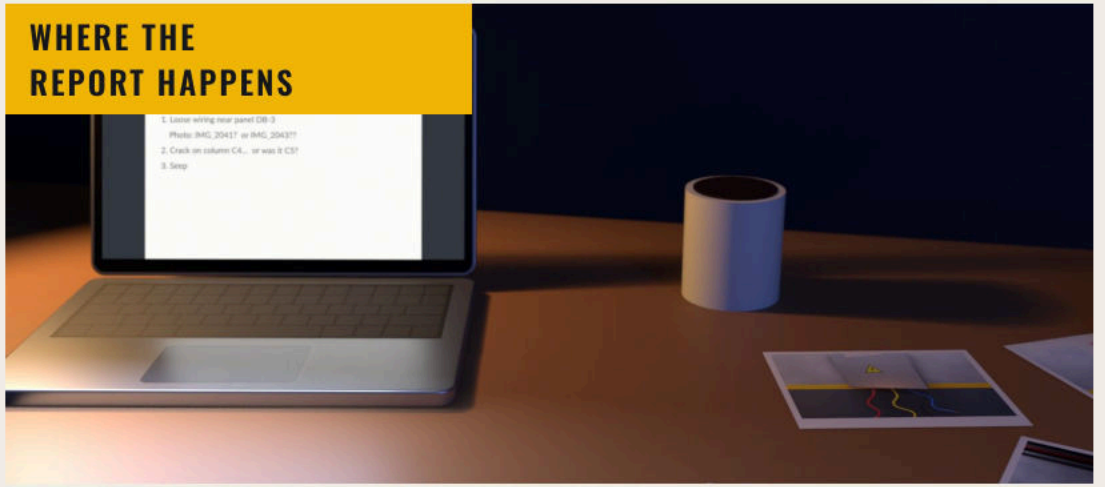

TEAM TECHAZSURE

Concept deck · October 2026

THE REPORT STILL HAPPENS AT A DESK

Notes retyped by hand

Paper notes and memory become typed text hours later.

Photos sorted at night

Dozens of photos get matched to the wrong issue.

No network on site

Basements and plants rule out cloud tools.

Reports arrive late

Clients and contractors wait for the write-up.

WHY CURRENT TOOLS FAIL ON SITE

On site	The reality	What most apps assume	What DeskLess does
Network	Basements, plants and unfinished buildings often have no signal.	A live connection to a server.	Runs entirely on the phone, in airplane mode.
Privacy	Photos show client premises and defects.	Photos and recordings go to a server.	Nothing leaves the device.
Language	Problems are described in mixed Hindi and English.	Typed, formal English.	Speak naturally; the report comes out in English.
Hands	Inspectors are walking, often with their hands full.	Typing into forms and fields.	One photo and one spoken sentence per issue.

THE SOLUTION

WALK THE SITE. PHOTOGRAPH THE ISSUE. SAY WHAT IS WRONG. LEAVE WITH THE REPORT.

DeskLess turns a site walk-through into a finished English inspection report, on the phone, with no connection.

ONE PHOTO, ONE SENTENCE

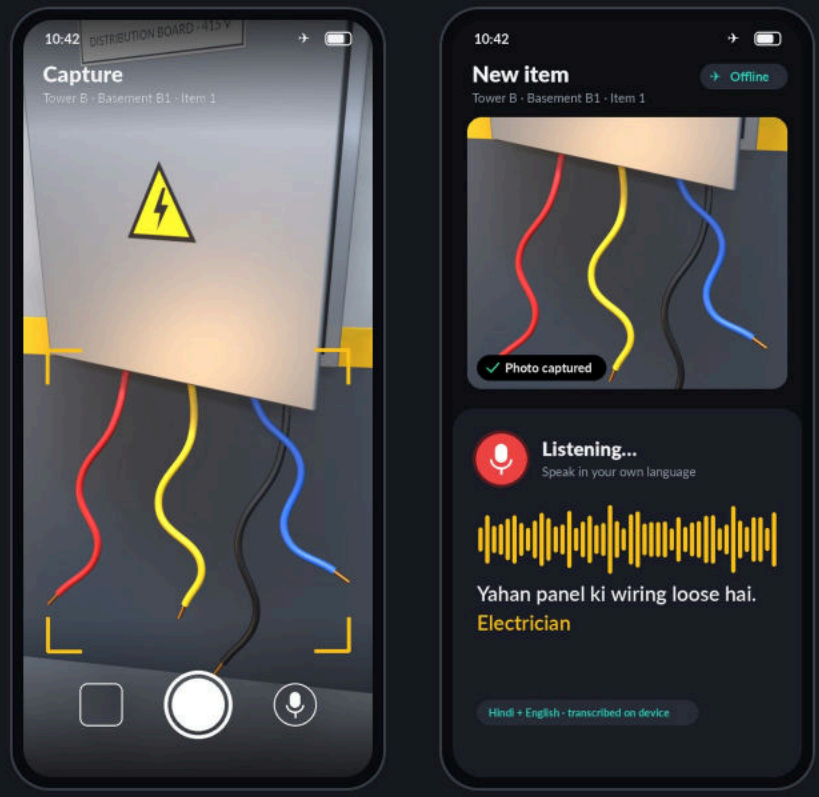

1 Photograph the issue

Point the phone at the problem and tap once. The photo becomes the evidence in the report.

2 Say what is wrong

Describe it aloud in the mix of Hindi and English people use on site. The transcript appears as you speak.

Concept screens. The app itself is built during the event.

STRUCTURED AND WRITTEN ON THE DEVICE

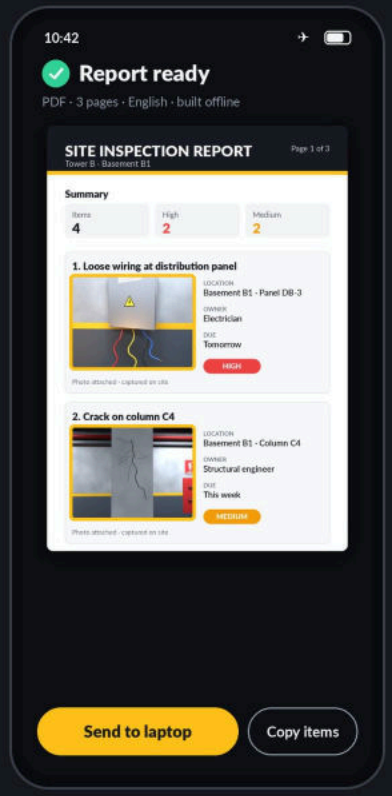

3 The model structures it

An open-source model on the phone reads the photo and the transcript, then fills in issue, location, severity, owner and due date.

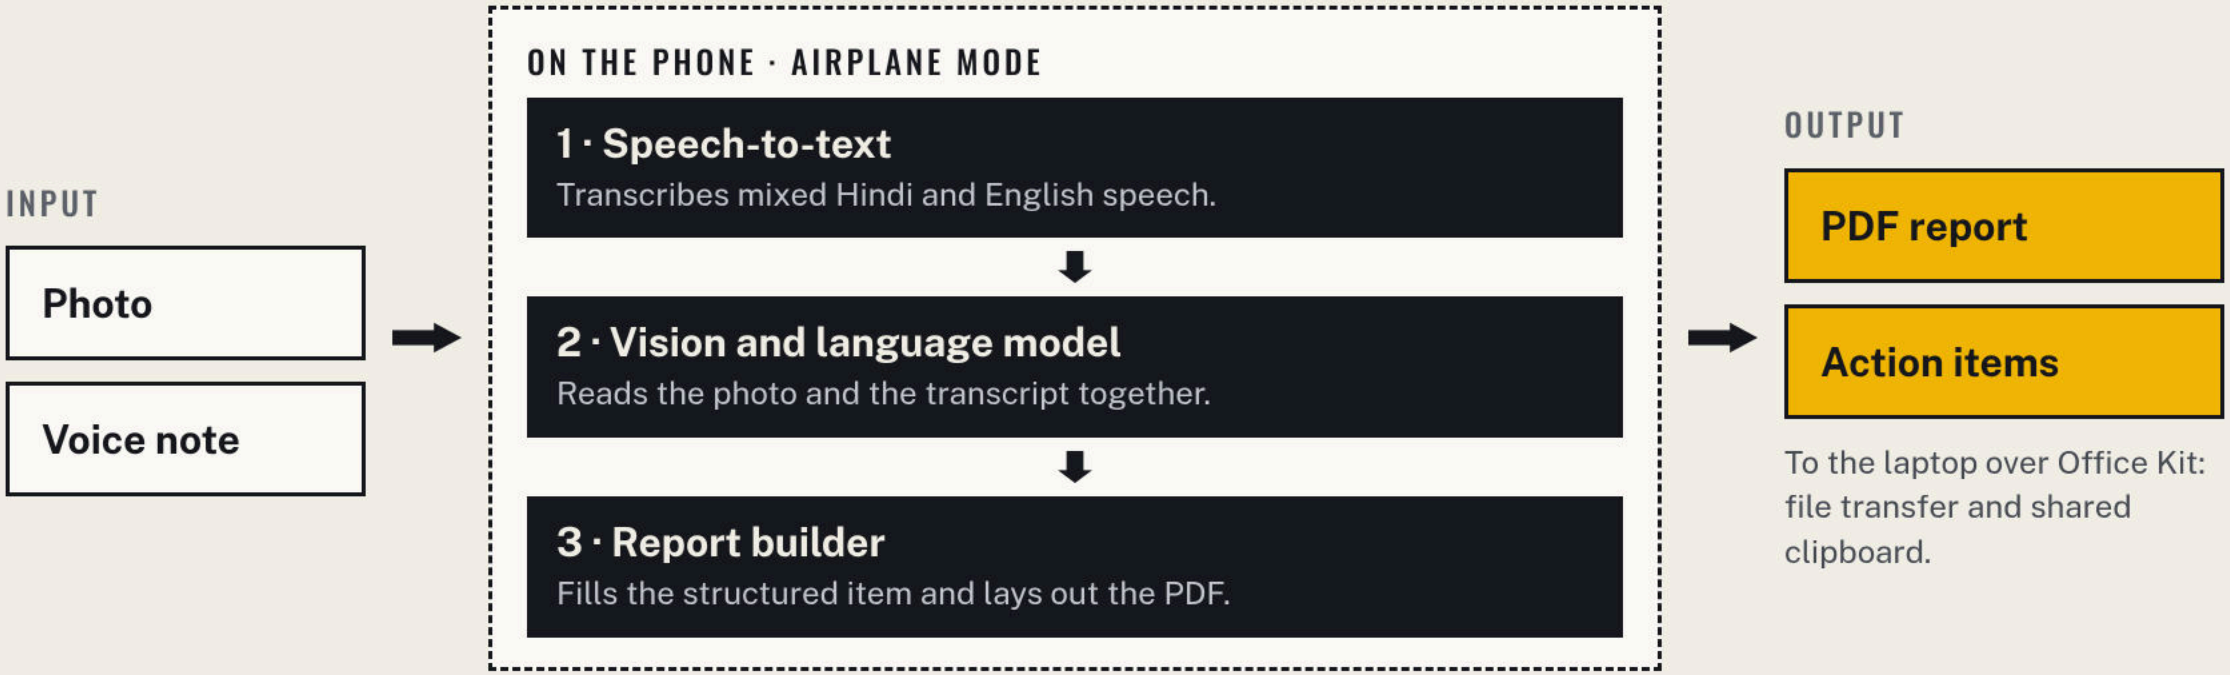

4 The report is written

When the walk-through ends, DeskLess lays out an English PDF with each photo attached to its own entry.

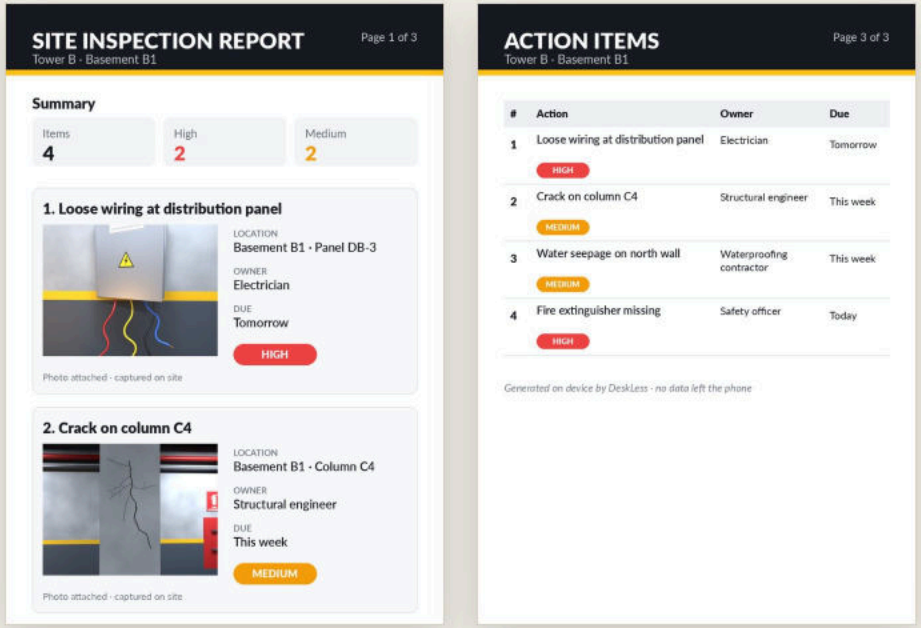

WHAT RUNS ON THE PHONE

Planned stack: open-source models (Gemma, Phi or Sarvam class) on the Snapdragon NPU; to be validated on the loaner phone.

WHAT THE CONTRACTOR RECEIVES

SITE INSPECTION REPORT
Tower B · Basement B1

ACTION ITEMS
Tower B · Basement B1
Page 3 of 3

#	Action	Owner	Due
1	Loose wiring at distribution panel HIGH	Electrician	Tomorrow
2	Crack on column C4 MEDIUM	Structural engineer	This week
3	Water seepage on north wall MEDIUM	Waterproofing contractor	This week
4	Fire extinguisher missing HIGH	Safety officer	Today

Generated on device by DeskLess · no data left the phone

An English PDF: a summary, one entry per issue with its photo, and an action table.

Office Kit carries the report to the laptop and puts the action items on the shared clipboard, ready to paste into an email or tracker.

FIT WITH THE SCORING RUBRIC

Criterion	Weight	Scored by	How DeskLess earns it
End product quality	30%	Jury	A complete job: walk-through in, sendable report out.
Novelty and impact	20%	Jury	Offline, mixed-language voice plus photo, on the device.
Creative phone use	15%	Device data	Camera, microphone and on-device AI in every single item.
Technical depth	15%	Jury	On-device speech and vision models; PDF built on the phone.
Office Kit usage	10%	Device data	The hand-off itself: file transfer and shared clipboard.
Demo and presentation	10%	Jury	In airplane mode, a juror speaks and the report appears.

Weights from the published rubric: 75% jury panel, 25% device data read from the loaner phone.

THE 48-HOUR BUILD PLAN

FRI 19:00
Kickoff

Project set-up; models loaded on the loaner phone.

SAT 10:00
Checkpoint 1

Photo and voice capture work; first on-device transcript.

SAT 19:00
Checkpoint 2

Photo and transcript become a structured item; items are saved.

SUN 09:00
Checkpoint 3

PDF report and Office Kit hand-off; full run in airplane mode.

SUN AFTERNOON
Jury pitch

Rehearsed demo: a juror describes an issue, the report appears.

IN SCOPE

One flow, end to end: capture, structure, report, hand-off.

LEFT OUT

Accounts, cloud sync, multiple users, extra report templates.

All code is written during the event. Red Light hours go to building and testing on the phone, with the laptop reached through Office Kit.

RISKS AND MITIGATIONS

Risk	Why it matters	What we do about it
Mixed Hindi and English is transcribed poorly	Every field in the item depends on the transcript.	Compare two speech models on the first night. Let the user correct the transcript with a tap. The photo stays as evidence.
The on-device model is slow	Waiting at each issue breaks the walk-through.	Use a small quantised model on the NPU. Structure items in the background while the inspector moves on.
The model fills in details nobody gave	A wrong owner or due date is worse than a blank.	Fill only what was said or seen. Leave other fields blank and mark them for review before the report is built.
